EDUCATION

University of Cincinnati Bachelor of Science, Computer Science	Cincinnati, OH Graduation Date: May 2024
--	--

TECHNICAL PROFICIENCIES

Languages: JavaScript (ES6+), Python, TypeScript, SQL, Java, C++, Swift
Frontend Engineering: React, Three.js, Babylon.js, Next.js, Angular, Tailwind CSS, 3D asset pipelines, real-time UIs, design systems
Data & Storage: PostgreSQL, MongoDB, Firebase, Redis (caching), optimized queries, real-time sync
Cloud & DevOps: AWS, Azure, Docker, Kubernetes, containerized deployments, CI/CD pipelines (GitHub Actions, Jenkins)
AI & ML Adjacent: LLM app integration, Generative AI UX, RAG workflows, model context protocols (MCP)
Mobile: Swift, SwiftUI, UIKit, SpriteKit, Xcode, React Native
Design Tools: Figma, Sketch, Adobe XD, Miro, FigJam, ProtoPie, SF Symbols, iOS Human Interface Guidelines
Certifications: Microsoft Azure AI Fundamentals, IBM Enterprise Design Thinking Practitioner

WORK EXPERIENCE

JOYDROP <i>Full Stack App Developer</i> - Built & scaled a full-stack internal and consumer-facing platform using Next.js, Nest.js, and Firebase - Designed and implemented an internal admin panel and dashboards for the CEO and leadership team, for visibility into usage metrics - Optimized frontend and backend performance, improving responsiveness by ~30% and enhancing reliability across user sessions - Led UI/UX execution from wireframes in Figma to production features, improving accessibility, interaction quality & retention - Regularly triaged and debugged production issues, prioritizing fixes with a quality-first mindset and strong attention to detail	San Francisco, CA Sep 2025 – Present
Bright Mind Enrichment <i>UI/UX Web Developer</i> - Developed and maintained donation pages, improving usability and secure payment flows, boosting conversions by 20% - Optimized site responsiveness and load times by 30% by implementing optimized React components and REST API integrations - Accelerated backend performance, cutting API response times by 35% and lowering bounce rates by 20% with streamlined logic - Delivered high-performance, accessible features end-to-end, boosting site traffic and engagement by 25%	San Francisco, CA Sep 2024 – Jul 2025
TOYOTA <i>Full Stack Developer – Production Control</i> - Reduced manual errors by 20% by designing and deploying SQL pipelines for Supplier Change Requests - Improved process scalability and collaboration by 30% by automating workflows with MS Azure and Kaizen methods - Cut manual reporting efforts by 40% by building real-time analytics dashboards with Power BI and integrating CI/CD pipelines - Improved data retrieval efficiency by 42% by automating supplier change request data infrastructure across 5+ teams	Georgetown, KY May 2023 – Aug 2023
BECO Ventures <i>UI Process Engineer</i> - Enabled real-time monitoring of 10K+ greenhouse sensor readings by developing a cloud-based data processing pipeline - Increased user efficiency by 40% by building interactive dashboards with React, Python, SQL, and MongoDB - Streamlined reporting, cutting generation time by 30% and improving accessibility by 55% through real-time processing systems - Improved product reliability and adoption by optimizing AWS infrastructure for 99.9% uptime and refining user flows	Singapore Sep 2022 – Dec 2022
P&G – UC Simulation Center <i>Data Analyst</i> - Designed automated analytics with Excel VBA + REST APIs, reducing processing time by 40% for global warehouse operations - Produced Power BI dashboards that improved decision-making speed by 25% across 3+ time zones - Validated data accuracy and improved reliability by integrating PyTest and automated testing pipelines - Facilitated multi-time zone collaboration by designing a shared analytics system, enabling consistent data entry worldwide	Cincinnati, OH Jan 2022 – Apr 2022
PROJECTS	
UTTER – Voice Capture for WatchOS & iOS [Swift, SwiftUI, WatchConnectivity, AVFoundation, Speech] - Crafted full-stack watchOS/iOS voice capture app with on-device ML transcription and keyword-based auto-categorization - Refined real-time visualization and seamless watch-to-phone audio transfer using AVFoundation & WatchConnectivity	Mar 2026 – Present
ZOOMIES – iOS Runner Game [Swift, SpriteKit, Xcode] - Built and optimized a Swift-based SpriteKit game with responsive physics, smooth animations, and low-latency performance on iOS - Developed UI components in Swift and UIKit aligned with Apple’s Human Interface Guidelines, improving usability & overall playability	Sep 2025 – Dec 2025
CINEMATE – Movie Recommendation App [Javascript (ES6+), React, TypeScript, Tailwind CSS, Git] - Optimized search & API performance by building efficient filtering with ES6+ (async/await, destructuring), improving API speed by 25% - Enhanced UX with AI-powered summaries and personalized recommendations using Retrieval-Augmented Generation	Sep 2024 – Jan 2025
